Project overview

The SOS HERITAGE project moves from the European cultural context, to undertake concrete actions to build the capacity of the heritage sector in facing the challenges and opportunities of digitalisation, digital access and risk management of tangible cultural heritage.

The project has been designed to develop and mainstream innovative tools to build the capacity of the cultural heritage sector in assessing, managing and preventing risk to their patrimony caused by natural disasters and climate change, and by collecting and experimenting best practices for promoting tangible cultural heritage and engaging audiences with the use of digital technologies.

TRUST

Project objectives

S01 Cultural Heritage Promotion

To share and test best practices of digital content creation and communication for successful stakeholders and community engagement.

S02 Digital application

To develop and test a web app, designed to help professionals handle their risk assessment procedures and produce risk management plans in an immediate, digital way.

S03 Training course

To develop and test a training course on “Risk management of cultural heritage” targeted at owners, managers and professionals.
