## 1. Characterisation of the pilot site

The Czech pilot site is managed by the Institute of Archaeology of the Czech Academy of Sciences in Brno, the Visitors Center Mušov – Gateway to the Roman Empire. Different educational trails should lead the visitors to the roman sites. At the same place there was a fortified military camp, which was partially built over recently, but most of it is hidden under the surface, the area is used for agriculture. Some archaeological excavations provide information about the dating and a significant part comes from the time of the Macromannic Wars. Different construction stages can be evidenced by overlapping fortification lines and buildings. In recent times, in addition to rescue excavations, mainly geophysical investigations have been carried out.

Archaeoparc “Gate to the Roman Empire” Mušov is an archaeological site with a small museum serving also as an interpretation and visitors’ centre. The site is rather robust against harming effects of natural hazards. There is no agricultural activity on the site except of the grass mowing. So the site can be damaged by vandalism only and the museum by vandalism and fire.

## 2. Threat analysis pilot site

Likelihood	Almost certain					
	Likely	pests				
	Possible	wear and tear	vandalism			
	Unlikely		fire			
	Rare			theft		
		Insignificant	Minor	Moderate	Major	Severe
Impact						

## 3. Responsibilities in cultural heritage protection – case study pilot site

Owners and curators are emergency responders for the site for general security – they have an onsite office. The nearest fire brigade locations are on the map.
